

CLIQ® GO WILLIAM CHANON WA

Access Control at your fingertips

Manage your security via the CLIQ® Go App Because your business is changing constantly

Do you recognise this situation?

Managing a business today means that you will be away from your desk, more than sitting in your office. While you are away, security needs change: new staff join, keys are lost, access rights need to be changed.

The CLIQ® Go app moves security to a new dimension, enabling you to control security in your building from your mobile device.

Schedule access to your rooms, or give contractors time-limited access

As your business grows, you can expand the system without disruption at the door

CLIQ® Go takes access control to the cloud, so you can manage your security anytime, anywhere

In a busy world, you need security systems that are flexible, leaving you to focus on growing your business

It's so easy to manage lost keys ...

Lost keys are a serious security risk. With CLIQ® Go, you can revoke access rights anytime, anywhere

..... An example

You revoke the lost key in real-time with the CLIQ® Go App wherever you are

The receptionist programmes a key to revoke access rights at the door

How does it work?

- 1. Select the user key
- 2. Revoke access rights for lost key and generate a new key with access rights (e.g. schedule & door) or change access rights for existing key
- 3. Optional: Program the key directly with the programming device on the run

...and change access

Access needs can change very quickly, and you need to react fast. CLIQ® Go allows you to manage access in real-time

:----- An example ------

Your employee needs access to a new door and calls the manager

You change access rights of the key in real-time via the CLIQ® Go App, wherever you are. The employee then simply updates the key at the reception

Your employee is granted the access she needs, with minimal fuss

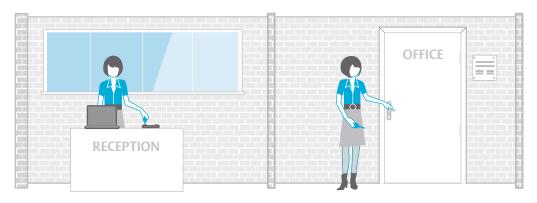

Upload changed access rights to CLIQ® key

Update the access rights in the cylinder

Businesses do not stand still

As your company grows, you need to know that your security system is flexible

..... An example

Your locksmith receives your request for new keys and cylinders and he can deliver new components very quickly

He programmes new cylinders and keys in his office. You can view updates via the CLIQ® Go App

Installation is quick with minimal disruption at the door

How does it work?

Your locksmith compiles CLIQ® keys and cylinders and will add them to your system in the cloud

CLIQ® Go

The locking system that keeps your business on the move

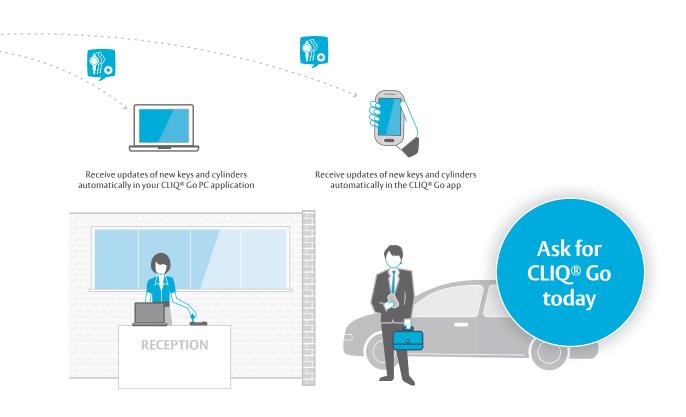

· High security CLIQ® cylinders for all door types, battery in the key, low maintenance, no cabling, long life time of 200.000 cycles

· CLIQ® programming devices for keys, available in desktop and mobile versions

· The cloud-based system means that the CLIQ® Go app works seamlessly. As an option your locksmith can manage the system as a service.
