As a leader in secure ironmongery solutions we know how important looking after your door hardware is. The entrance to any building is the busiest area, so the continued operation of your entrance products is vital. Undertaking regular service and maintenance can prevent unexpected hardware breakdowns and assist in prolonging the life of your products.

Your Door Hardware Service Plan

- Safeguards people and property
- Identifies issues early and reduces the need for emergency call-outs later
- Identifies compliancy issues on fire doors and emergency escape doors
- Includes a regular service visit twice a year
- Includes a service report to confirm the checks carried out detailing any further action required

Benefits:

- Pay annually or spread the cost over 12 months;
- Opt for a rolling contract – no need to renew;
- Includes ironmongery on timber, steel, aluminium and composite single and double leaf doors.
- Regular pre-planned maintenance will generate savings compared to costly emergency repairs and replacements
- Reduce your costs and avoid emergency call-outs

As a busy facilities manager or business owner, keeping on top of what needs checking by when could lead to problems if you're not adhering to regulations. Here at William Channon our solution is simple: let us take care of those checks with regular site visits and a service plan to ensure you are **legal and secure.**

We are fully conversant in technical data relating to security, fire safety, disabled access and acoustics and whether you are looking to spec a new build or maintain a public building or workplace, our service plans have you covered. Our company has been helping businesses and homeowners for over 100 years, so you can rely on our tried and trusted services.

- ✓ Ensure high efficiency and reliable operation
- ✓ Stay safe and secure
- ✓ Keep your doors in good working condition
- ✓ All works carried out by fully qualified and experienced service engineers

WILLIAM CHANNON^{WNN}

Architectural Ironmongery

Your Service Plan includes

Comprehensive industry knowledge
and high-quality workmanship

Hinges

Hinges need to be in good working order so we visually inspect their condition, check the tightness of fixing and apply light machine oil where required.

Overhead Closers

To ensure door closes fully from open position and latches fully in to the striking plate where relevant a visual inspection is carried out. Tightness of fixings are checked and any foreign material removed from moving parts. Light machine oil is applied to moving parts at bracket and arm knuckle.

Floor Springs

Again, with this important hardware we visually inspect the floor spring to ensure door closes and latches to the striking plate. Pivot points and moving parts are cleared of any debris.

Lockcases

We check for tightness of fixings on strike plates and forends and that the lockcase operates correctly. Any debris or dirt is removed from latch bolts and they are lubricated if necessary with light machine oil.

Cylinders

Cylinders are visually inspected and lubricated if necessary with approved cylinder spray or graphite.

Lever Handles

Lever handles are always well-used so we check tightness of fixings and check for correct operation of lever handle.

Pull Handles & Other Ironmongery

All other ironmongery and pull handles are visually inspected and fixings tightened if necessary.

Intumescent

Smoke seals are an important part of fire doors. We ensure all intumescent seals on fire doors comply with regulations.

Emergency Exit Hardware

On visual inspection of emergency exit hardware we check operation ensuring tightness of fixings and compliance with regulations. We also ensure the exit is clear of obstruction.

We will also check the suitability of all existing hardware on fire resistant doors and emergency exit doors and advise on replacement where necessary.
